

Weigh Right's PMB-2 to weigh out small whole peppers into bags.

SCALE: This PMB-2 scale was designed to weigh 1 to 2 lbs. of small whole peppers at 12 to 14 cycles per minute with an accuracy of 0-1 piece over. An automatic infeed conveyor was also included to control the product level in the scale.

The scale was customized with textured contact surfaces, flow gates with neoprene rubber to control the product flow from the supply hopper and flap gates to hold back product from falling into the weigh bucket after the target weight had been met.

The scale has a gentle slope discharge hopper that was customized with a form fitting chute for the customer's bag. It was outfitted with a hinged Plexiglas window and rubber flap to keep product from bouncing out.
