Weigh Right's NEW Bulk Scale: The BDC-3601-STP

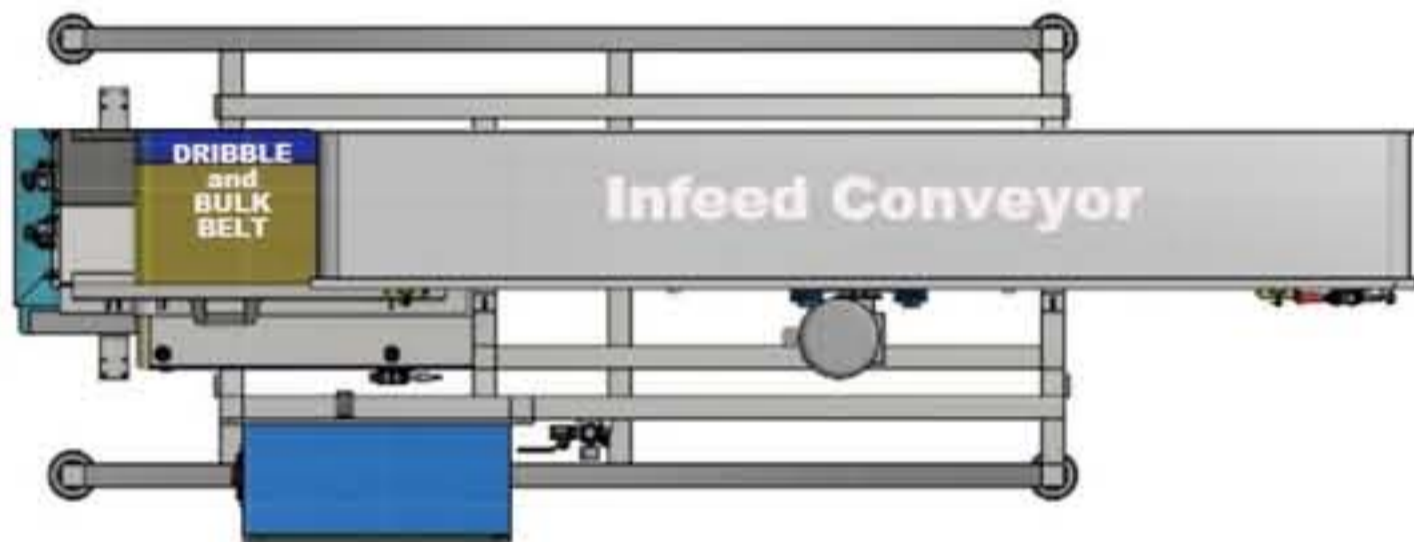

For customer's bulk packaging 5-100 lbs. of difficult products that are moist / sticky or light and fluffy our new BDC-3601-STP will provide them a scale that can deliver the product to the weigh bucket and ensure a clean discharge into a bag or box.

HOW IT WORKS: Customers feed product onto the BDC-3601-STP infeed conveyor that meters the product onto the bulk and dribble belts of the scale (see below top view). The bulk and dribble belts feed the product into the weigh bucket at a fast rate. When the target weight is almost completed, the bulk belt stops and the dribble belt slowly puts the last few ounces in to complete the desired target weight.

HOW IT WORKS: The weigh bucket is designed with steep sidewalls and Bombay bucket doors to ensure a complete discharge of weighed product into the bag or box (see below illustration).

STEEP ANGLE WEIGH BUCKET

OPTIONAL: The infeed conveyor can also move product in reverse direction for either feeding other equipment or diverting product into a storage bin if downstream equipment stops.
