

# Filling systems for weighing free flowing products

Have you been looking for quality-proven systems to weigh and fill your free flowing products?

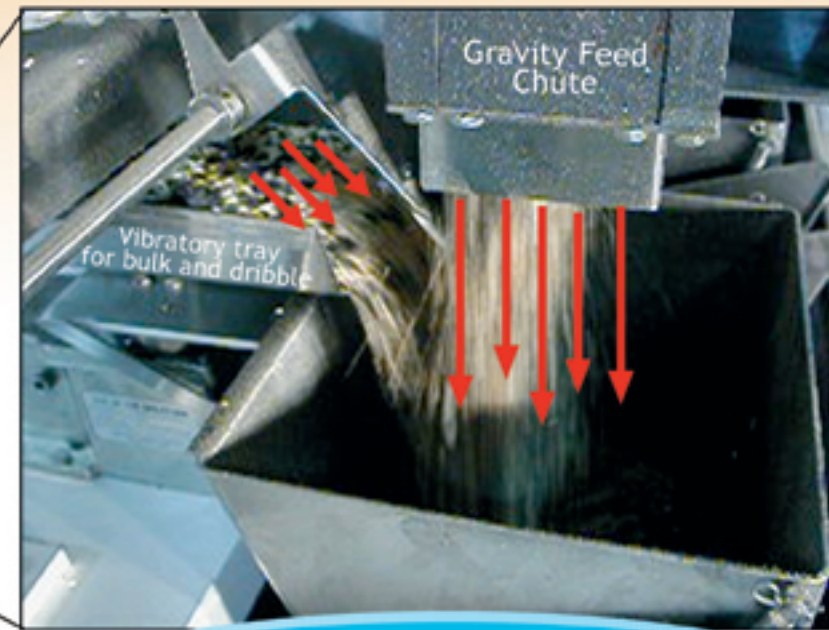

**Weigh Right's** PMB-FL series are gravity / vibratory net weighers that offer fast and accurate weighing of dry free flowing products for retail and bulk packages.

Whether you need to package 2 lbs., 25 lbs. or 100 lbs., **Weigh Right** has a system to accurately and quickly do the job regardless of density changes!

All our systems are designed with non-proprietary components allowing for quick service and availability of parts. Controls come standard with 3 setpoint feed control giving you greater control of speed and accuracy. Multiple head scales have menu driven controls with up to 50 job memory storage with an easy-to-read graphic display and help menus for machine set-up.

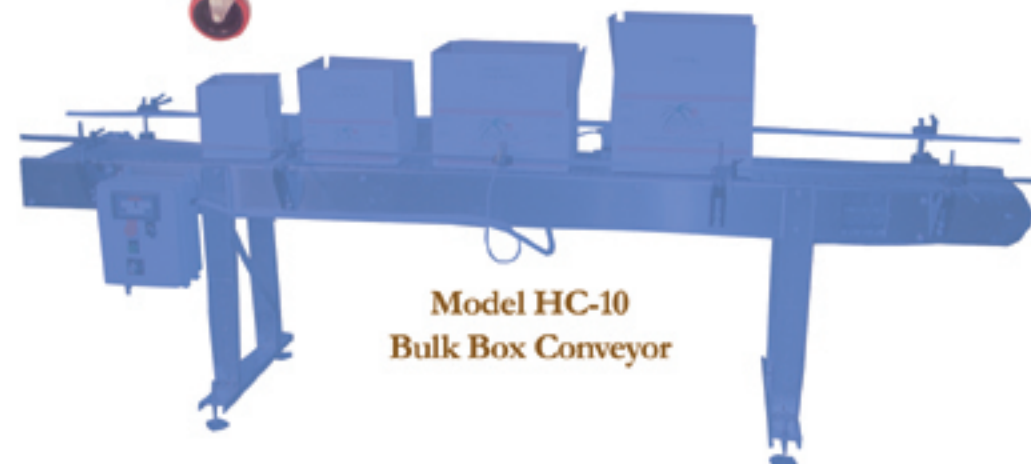

Well suited to interface with a bagger or container indexing conveyor, we design our frames around them all with controls for a seamless operation.

Reduce your labor. Boost your productivity. Increase your profits. Call on us today and weigh your options right!

## How it works:

The scale quickly fills product into the weigh bucket using both the gravity feed chute opening and the vibratory tray until the bulk weight has been met, then the gravity chute closes and the vibratory tray dribbles in the last portion. Product will be released when activated either by a foot switch or signal from a bagger or conveyor.
