A newsletter from Weigh Right

Automatic Counting of Parts

For customers who fill their product by piece count, Weigh Right offers our vibratory PMB Scale Series that utilizes Weigh / Count technology. The average piece weight from a sample set is used as a single piece count. The operator enters a target count into the controls, the scale is loaded with product and the operator hits START. The scale's vibratory trays are designed to control the flow of the parts quickly and accurately into the weigh bucket (check out the video link below).

Shown Above: PMB-1 Scale with custom frame to mount over a bagger. 1 to 6 lane scales are offered depending on speed requirement or if blending products.

See our [new video](#) for more features.
