Pretzels: From Batch to Bag!

Our single lane vibratory net weigh scale was purchased by a customer wanting to load a large batch of pretzel sticks into a bin that would feed them (and reduce fines) to an infeed conveyor feeding them to the scale that would weigh and fill the pretzels quickly and accurately (about 10 bpm). An operator would hand place a bag to be filled and sealed.

Shown Above: Stoker feeder feeding into infeed conveyor that meters product to scale hopper.

Shown Above: Perforated tray allowing small fines to be discarded before going to the scale and packaged.

Shown Above: Stoker feeder with large feed bin to receive bulk

product and vibrate into the infeed conveyor hopper at a controlled manner.
