

Weighing In

A newsletter from Weigh Right

Filling micro greens into bags on a VFFS bagger.

Filling a leafy bulky product down a forming tube can be difficult due to product bridging. Weigh Right offers our FCS-2-CB that offers a weigh bucket with a conveyor belt that discharges the portioned product in a controlled manner streaming the product into the forming tube. [Click on the video link below to see it in action.](#)

FCS-2-CB shown with cleaning platform.

Dual infeed conveyors gently elevate and meter the product to the scale heads for optimum speed and accuracy performance.
