A newsletter from Weigh Right

## Automatic Counting of Parts

For customers who fill their product by piece count into bags, Weigh Right offers our PMB Series of vibratory scales that will interface with the customer's bagger of choice. The scale's frame is designed to mount over the bagger and drop the portioned parts into the bag automatically. The scale's vibratory trays are designed to control the flow of the parts quickly and accurately into the weigh bucket (check out the video link below).

Shown Above: PMB-2 Scale with custom frame to mount over a bagger. 1 to 6 lane scales are offered depending on speed requirement or if blending products.
