

Weighing In

A newsletter from Weigh Right

Filling peanuts into cans with recirculating conveyor.

For customers who need package peanuts into cans (or similar products into rigid containers), the PMB-2 will provide fill rates up to 24 cans per minute with an accuracy of 0-3 grams over (depending on product)...that's quick and accurate.

Plus, Weigh Right offers our newly designed recirculating conveyor allowing the operator to place empty cans onto the conveyor and receive filled cans from the same position...that's efficient.

Add our IC-12 infeed conveyor that you load at floor level, it will keep the scale's hopper filled at just the right level...that's convenient. See the PMB-2 in action in our video link below.

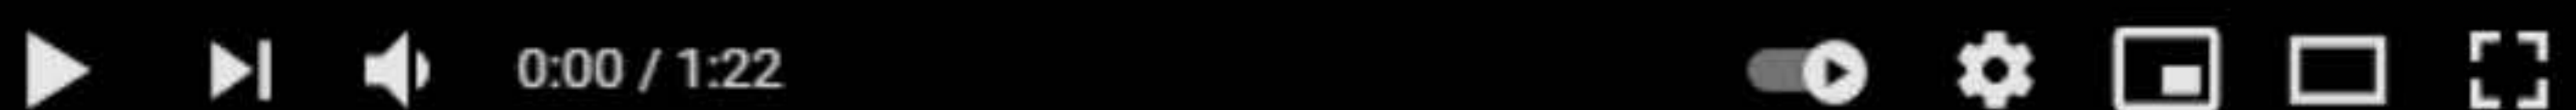

PMB-2 Scale shown with our new HC-20 recirculating conveyor and infeed conveyor.
