G-50-E: Entry Level Bulk Bag Filler

For customers who package 5-50 lbs. of product into large bags, the G-50-E offers an easy-to-use direct fill approach weighing the product as it is filled into the bag. Fill rates are estimated at 1-4 bpm depending on package weight and product density.

Ideal applications are free flowing pet foods, granulated powders (not too dusty), pellets and similar products. [See our new video of the G-50-E.](#)

Shown Above: G-50-E with painted frame (stainless steel washdown model available).
