A newsletter from Weigh Right

Packaging Hardware into Bags

For customers packaging hardware into bags, Weigh Right offers our PMB-2 Scale that utilizes Weigh / Count Technology to portion various size hardware into bags by piece count. The PMB-2 offers fill rates of 10 to 12 bags per minute and can also be used to blend 2 different parts into the same bag like nuts and bolts. Weigh Right designs their scales that package hardware with plastic liners for noise reduction. And due to the denser material we add extra support to the supply hopper for sturdiness.

[See our new video of the PMB-2.](#)

Shown Above: PMB-2 Scale designed for packaging hardware into bags in a semi-automatic operation requiring an operator to hand-place the bag for filling.

WEIGH RIGHT

Automatic Scale Co.

PMB-2 Scale

Designed to weigh and fill hardware utilizing Weigh / Count Technology for single part packaging and blending two separate parts

See our [new video](#) for more features.
