## Filling IQF Fruit into Bags using our Dimpled 4-Lane Scale with Conveyors

**Application:** Customer needed 40 bags per minute but did not want a VFFS (due to cost, space and changeover as they use 4 different bag sizes). Weigh Right provided our PMB-4 Scale with adjustable bag spouts and our IC-45 product infeed conveyor along with our HC-10 bag take-away conveyor to feed a band sealer.

In this application, the customer is using 4 operators holding pre-made bags and activating the scale to release the portioned product. The bags are then placed on a take-away conveyor to be sealed. The IC-45 infeed conveyor is fed at floor level and elevates the product to the scale's supply hopper using a product transfer chute to ensure even spreading across all 4 lanes.
