

Weighing In

A newsletter from Weigh Right

Packaging Parts into Bags

For customers packaging product into bags, Weigh Right offers a PMB-2-CT scale with a 3-tray vibratory feed design, that utilizes Weigh / Count technology to portion the product quickly and accurately using the average piece weight and dispensing it automatically into the bag. The product is elevated to the PMB-2-CT hopper by our IC-45 infeed conveyor that is loaded at floor level and controlled by a level sensor to turn on-and-off. The bags are automatically presented by a bagger (made by others). Check out our new video of this complete automated system.

[See our new video of the PMB-2-CT.](#)
