

Packaging Coffee Beans at 20 Bags Per Minute

Most coffee roasters know us for the reliable [iQ-1E](#) — the go-to entry-level scale that over 500 shops use every day in semi automatic mode.

But when you're ready to scale up production without sacrificing accuracy, that's where the PMB-2 shines.

20+ bags per minute* perfectly pairs with VFFS baggers, rotary pre-made pouch machines, or can-indexing lines.

Whether you're packing 8 oz retail bags or 5 lb bulk, the PMB-2 is built for roasters who are ready to fully automate.

Do you have a project to increase your line speed coming up? Reply to this email or call us — we'd love to talk through how the PMB-2 will add value to your packaging process.

Happy weighing,

[See our new video of the PMB-2.](#)
