

Weighing In

A newsletter from Weigh Right

Weighing and filling IQF or moist products directly into the case!

For customers packaging 5 to 50 lbs. of IQF or moist products into bulk cases, Weigh Right offers our G-50-BDC-HCU Direct Fill Scale.

The G-50-BDC-HCU utilizes a three-belt feed design including the cascade belt that feeds onto the bulk and dribble belts to feed the product quickly and accurately into the case which is automatically indexed onto the weighing zone that has load cells installed within the frame.

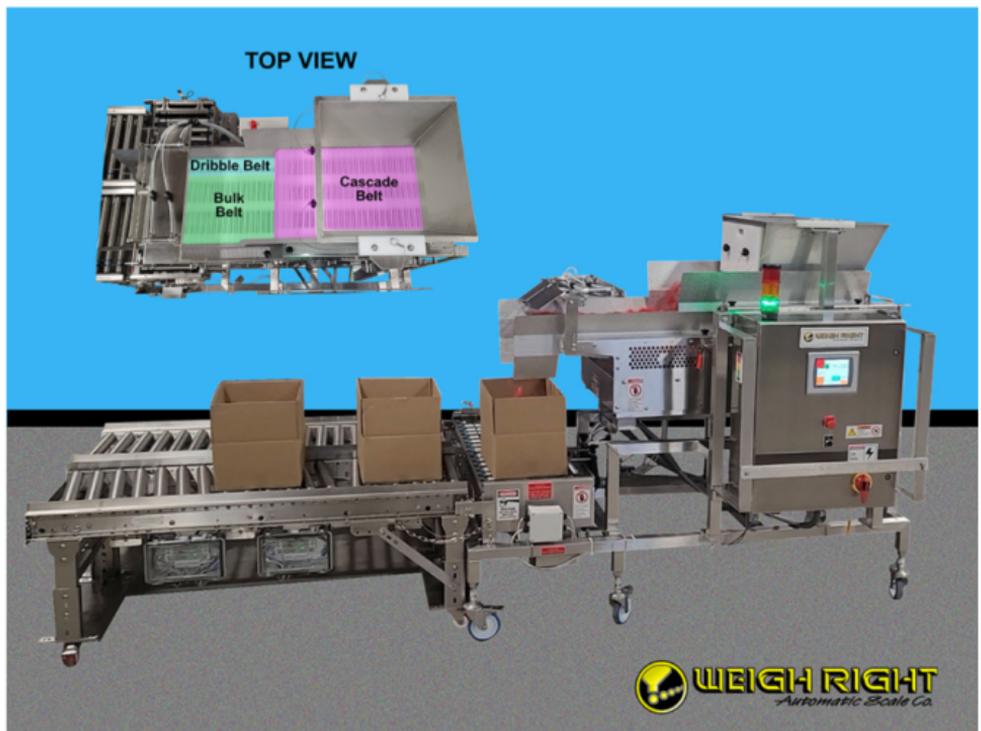

The power roller conveyor comes in a "U" design allowing a single operator to load empty cases on one side and receive the filled cases back to the same place. Within the power roller conveyor are multiple zones to control the indexing of the cases from one zone to the next keeping the line moving quickly and efficiently.

The G-50-BDC-HCU offers a compact design and low elevation, a perfect fit for tight spaces.

For more information, contact us at 800-571-0249.
