

Weighing In

A newsletter from Weigh Right

Automate Filling into Containers!

Automatically filling 10 containers a minute (600 per hour) represents a significant advancement for companies currently filling products by hand.

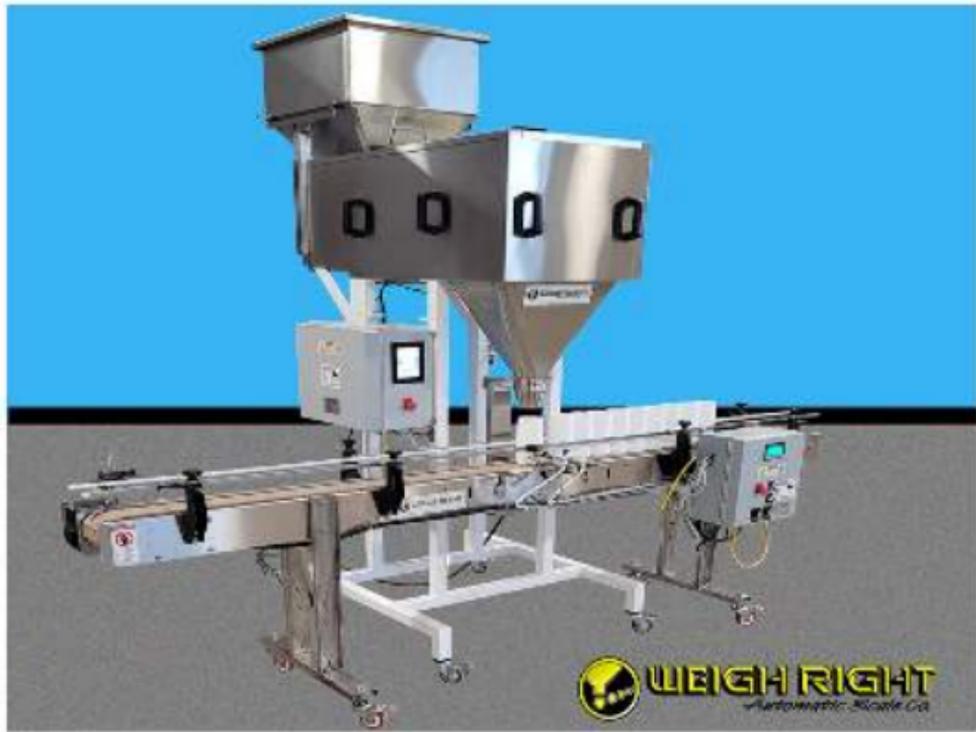

Weigh Right's iQ-1E is designed to handle various products, including candies, pellets, nuts, snacks and similar items. When interfaced with our HC-10 container indexing conveyor, the iQ-1E can automatically fill into jugs, tins, jars, cartons and trays.

For products that can be dusty, we offer a stainless steel, multi-panel dust hood to go over the vibratory feeding trays. This helps contain dust within its chamber and includes an exit port for connecting a dust hose that's connected to a dust collector (provided by others).

Check out our latest video featuring the iQ-1E with the HC-10 indexing conveyor.

See our new video of the iQ-1E.
